## Design Handoff

### What is a design handoff?

DEVELOPER

 Handoff desain adalah titik dalam proses pengembangan produk di mana pengembang menerapkan desain yang telah selesai. Untuk memastikan handoff berjalan sukses, kolaborasi yang baik antara desainer dan pengembang sangat penting.

UX DESIGNER/

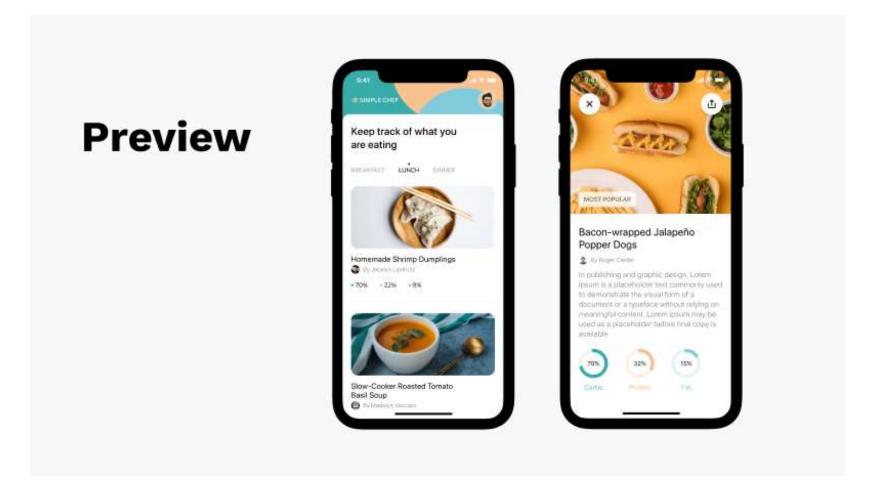

PRODUC DESIGNER

Pada desain handoff, ada beberapa hal atau prototipe yang perlu diperhatikan untuk memastikan proses berjalan lancar:

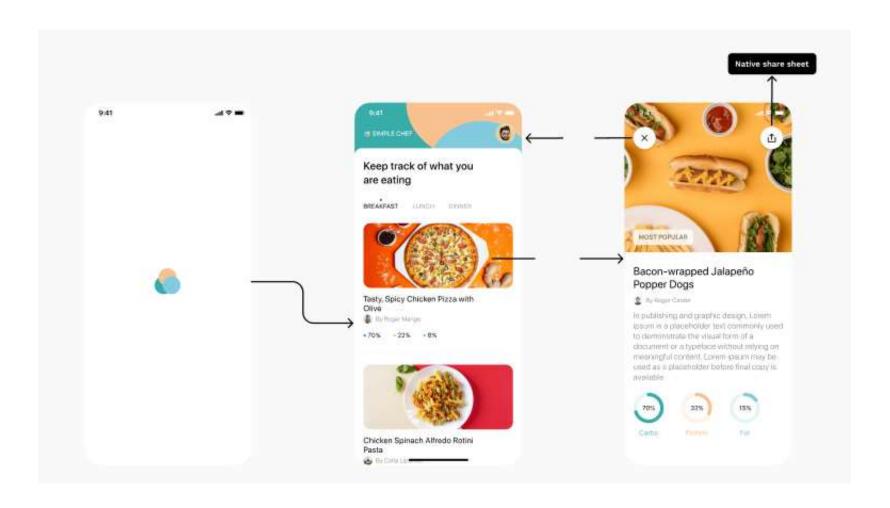

- 1. Dokumentasi Lengkap: Sertakan semua spesifikasi desain, termasuk ukuran, warna, tipografi, dan elemen antarmuka
- 2. Prototipe Interaktif: Buat prototipe interaktif yang menggambarkan alur pengguna dan fungsi aplikasi, sehingga pengembang bisa memahami interaksi yang diinginkan.
- 3. Komunikasi yang Jelas: Pastikan ada saluran komunikasi terbuka antara desainer dan pengembang untuk menjawab pertanyaan dan mengatasi masalah yang muncul.

- 4. Akses ke Asset Desain: Berikan akses mudah ke semua aset desain, seperti ikon, gambar, dan font, dalam format yang sesuai.
- 5. Konsistensi dalam Desain: Pastikan bahwa semua elemen desain konsisten dengan panduan gaya dan standar yang telah ditetapkan.
- **6. Feedback Loop**: Sediakan mekanisme untuk umpan balik dari pengembang terkait tantangan yang dihadapi selama implementasi.
- 7. Prioritas Fitur: Tentukan fitur mana yang harus diprioritaskan untuk pengembangan awal, agar fokus pada elemen yang paling penting terlebih dahulu.

### **UI** Characteristics

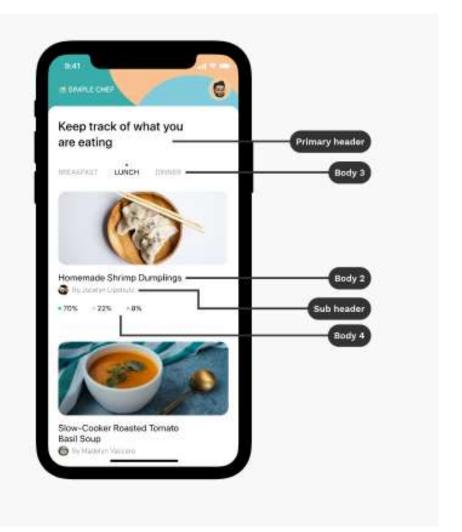

### UI Characteristics (2)

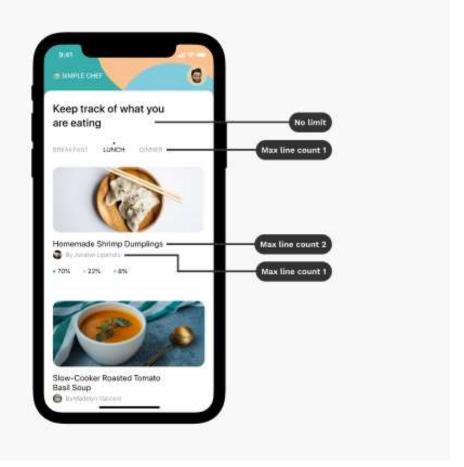

### **Text styles**

If your developers are using text styles (similar to how designers use a design system), you may highlight the text style names here.

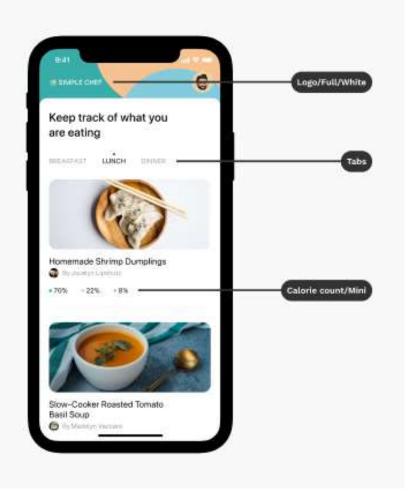

## Maximum line-count

After it reaches the count limit, the text should be truncated.

### Components

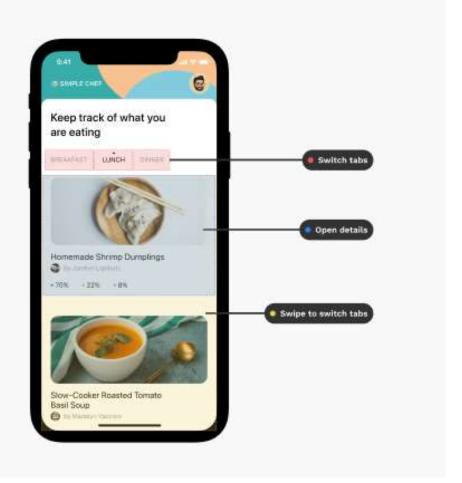

If your developers are using components (similar to how designers use a design system), you may highlight the component names here.

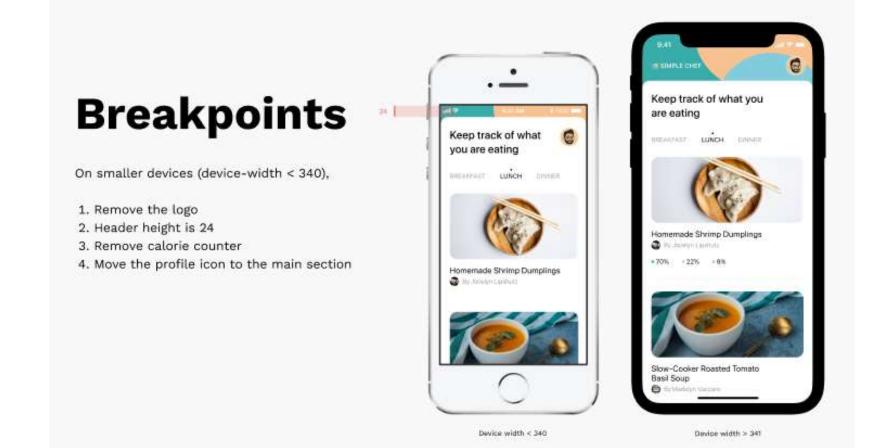

### Touch area

The tab text has padding to increase the touch area

### **Animation & Transition**

### **Loading** → home

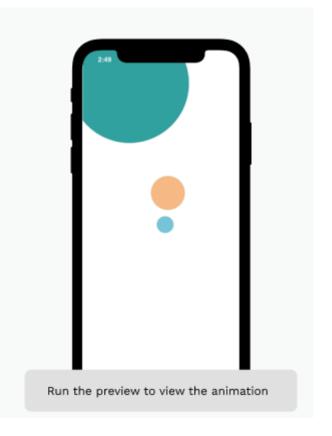

Break your transition into small sections and explain.

#### Circle one (Green circle)

- Once the loading is finished, the first circle will start moving first
- Move to X: -120, Y: -320
- · Animation time: 400ms
- · Easing: Ease in and out

### Circle two (Orange circle)

- · Starting delay: 200ms
- · Move to X: -120, Y: -320
- · Animation time: 300ms
- Easing: Ease in and out

### **Animation & Transition**

### Circle three (blue circle)

- · Starting delay: 500ms
- · Animation time: 300ms
- · Easing: Ease in and out

### Rest of the content

- · Starting delay: 700ms
- · Move from bottom
  - From "y = device height" to "y= device height - 100"
- · Animation time: 300ms
- · Easing: Ease in and out
